

THE SOULSCOPE CANON

Foundational Edition

The philosophical, scientific, mathematical, visual, and engineering direction of SoulScope

VERSION 1.0 • AUGUST 2026 • LIVING SPECIFICATION

The Instrument

A scope is an instrument that helps us see what is already present, but ordinarily difficult to perceive.

SoulScope is an instrument for observing the inner environment. It is designed to organize measurable biological and behavioral signals into information a person can use for reflection, self-understanding, and awareness of change over time.

The first generation is intentionally focused on voice. Future layers may include eye behavior, pupil dilation, facial and body expression, breathing, heart rate, movement, sleep, and other measurable signals. These are part of the long-term architecture, not claims about the present product.

CURRENT PRODUCT BOUNDARY

Voice is the first and only production observation layer being perfected now. Future modalities remain research directions until they meet the same evidence, privacy, reliability, and validation standards.

A Letter from the Founder

Every instrument humanity has created has expanded what we can perceive. A microscope reveals cells. A telescope reveals distant galaxies. A stethoscope reveals rhythms inside the body. A scope does not create something new; it helps us observe what was already there.

SoulScope began with the belief that our inner world is always expressing itself. Voice, breathing, eyes, posture, movement, facial expression, heart rhythms, and many other signals continually shift as we think, adapt, recover, relate, and move through life. Most of these changes are too subtle to consciously notice. Together they form patterns.

My personal inspiration also comes from faith: the belief that creation begins with the spoken word, and that voice and vibration are fundamental expressions of life. This spiritual inspiration explains why voice feels so central to the vision. It does not replace the scientific boundary of the product. SoulScope measures acoustic and behavioral signals; it does not claim to measure the soul, spirituality, divine activity, identity, or hidden truth.

The voice is the first lens because it is immediate, accessible, richly structured, and inseparable from the body that produces it. SoulScope exists to help make patterns in that expression visible, while preserving uncertainty, context, and the individual's authority over meaning.

The instrument provides evidence. The individual provides meaning.

FOUNDATIONAL PRINCIPLE

The Canon at a Glance

The SoulScope Canon is the authoritative collection that governs how the product reasons, renders, communicates, and evolves. It resolves conflicts between older documents and prevents individual features, prompts, interfaces, or models from inventing their own interpretation rules.

VOLUME	GOVERNS	PRIMARY QUESTION
I — Constellation Bible	Evidence, dimensions, states, interactions, abstention	How does SoulScope reason?
II — Resonance Signature Bible	Deterministic field mathematics and visual truth	How does SoulScope render the result?
III — Design Bible	Brand, language, interface, typography, color, motion	How should SoulScope feel and communicate?
IV — Developer Bible	Architecture, contracts, tests, security, versioning	How is SoulScope implemented safely?
V — Research & Validation	Measurement reliability, construct testing, fairness, outcomes	How does SoulScope earn its claims?

GOVERNANCE

When documents conflict, scientific safety and the immutable Evidence → Decision contract take precedence. Material semantic changes require a versioned rule set or a new permanent ID. Historical results are never silently rewritten.

VOLUME I

The Constellation Bible

How SoulScope transforms measured voice features into bounded, traceable reflection.

I. The Evidence-First Contract

SoulScope does not map one acoustic feature to one emotion. Vocal measures are many-to-many cues influenced by anatomy, language, task, device, health, environment, style, and context. Every abstraction must therefore remain linked to its source measurements and reliability conditions.

Nothing bypasses the Evidence Ledger.

STAGE	RESPONSIBILITY
Raw Acoustic Features	Immutable outputs from versioned extractors.
Evidence Engine	Quality-gated observations about measured change or structure.
Evidence Ledger	Provenance, support, contradiction, confounds, reliability, baseline, and missingness.
Dimension Engine	Continuous functional tendencies derived from independent evidence families.
Constellation Engine	Four-point geometry, candidate states, boundary blends, and unresolved outputs.
Interaction Engine	Typed relationships among independently resolved constellations.
Pattern Engine	A descriptive label selected only after reasoning is complete.
Decision Ledger	Why a result was published, blended, suppressed, or unresolved.
Immutable Result Object	Single signed object consumed by narrative and visualization.

Scientific claim boundary

TIER	ALLOWED
A — Measurement	Direct quantities such as F0, HNR, jitter, pause duration, voiced ratio, and spectral slope.
B — Functional evidence	Bounded observations supported by multiple measurements, such as increased pause load or reduced prosodic variability.

C — Reflective hypothesis

Possible lived meaning presented probabilistically, with alternatives.

D — Prohibited inference

Diagnosis, deception, identity, organ, causal, or certainty claims unsupported by evidence.

2. The Four Constellations

CODE	CONSTELLATION	FOUR POINTS	QUESTION
COG	Cognitive Form	Organization • Exploration • Focus Continuity • Processing Demand	How is mental work being organized and sustained?
REG	Regulatory Motion	Activation • Stability • Flexibility • Recovery	How is the system responding, adapting, and returning?
CAP	Available Capacity	Mobilization • Reserve • Effort Cost • Sustainability	What appears available, and what does functioning seem to cost?
EXP	Expressive Interface	Range • Openness • Restraint • Relational Availability	How is inner activity carried into outward expression?

IMPORTANT

These are not four emotions. They are four views of current vocal functioning. No constellation independently diagnoses mood, motive, personality, illness, truthfulness, or hidden content.

Posterior point model

Each dimension is represented as a posterior distribution on 0–1, not a naked scalar. Store mean, lower and upper bounds, confidence, evidence coverage, baseline trust, contradiction, coherence, momentum, and unresolved status.

BAND	PROVISIONAL RANGE	MEANING
Low	0.00–0.29	Evidence leans toward the lower expression.
Mid-low	0.30–0.44	Mild lower tendency; boundary-sensitive.
Balanced zone	0.45–0.55	Near reference or mixed evidence; never “perfect.”

Mid-high	0.56–0.70	Mild higher tendency; boundary-sensitive.
High	0.71–1.00	Evidence leans toward the higher expression.
Unresolved	Any mean with wide interval / low confidence	Unknown; never converted to low, neutral, or balanced.

3. Normalization and Confidence

When a compatible trusted reference exists, use robust median/MAD normalization:

$$z_f = \text{clamp}((x_f - \text{median_ref}) / \max(1.4826 \times \text{MAD_ref}, \epsilon_f), -3, 3)$$

If the reference is absent, incompatible, version-mismatched, or has zero spread, personal deviation remains unresolved. Missing baseline is unknown, not population average.

CONFIDENCE COMPONENT	ROLE
Direction score	Weighted signed evidence after baseline and context adjustment.
Evidence coverage	Observed required families divided by required families.
Quality reliability	Conservative aggregate of signal quality and task compliance.
Agreement	One minus normalized conflict among independent evidence families.
Baseline trust	Established 1.0; provisional ≤ 0.7 ; within-session ≤ 0.6 ; absent 0.
Boundary distance	How clearly the posterior separates from neighboring state regions.

CALIBRATION RULE

All numerical weights and thresholds are engineering priors until calibrated on SoulScope data with preregistered outcomes and frozen evaluation sets. Never hard-code 0.50 as a permanent scientific truth.

4. Geometry, States, and Abstention

DESCRIPTOR	DEFINITION	USE
Magnitude	Mean radial extent of resolved points.	Expression strength, not wellness.
Dominance	Largest point minus mean of other resolved points.	One-point leadership.
Symmetry	One minus normalized pairwise spread.	Balanced versus uneven geometry.
Tension	Weighted separation of predefined productive-tension pairs.	Internal pull, not pathology.

Coherence	Cross-evidence agreement and temporal consistency.	Whether the shape is interpretable.
Compensation	A strong point offsets a weaker or costly point.	Function maintained through another resource.
Momentum	Reliable signed change across ordered segments or scans.	Transition and recovery.
Distortion	Localized extreme with contradiction or low coherence.	Uncertain geometry; reduce confidence.

Canonical states are compact reference regions, not exhaustive boxes. Candidate selection must reject states whose evidence requirements or policy constraints fail. Adjacent candidates within a calibrated fit margin become a boundary blend. If no candidate exceeds the publish threshold, the correct result is unresolved.

Unknown evidence must never be converted into a complete, neutral, or aesthetically convenient result.

5. Cross-Constellation Meaning

VERB	OPERATIONAL MEANING
Reinforces	Two states increase the same functional interpretation.
Buffers	One state reduces likely cost or volatility of another.
Amplifies	One state increases the intensity or cost of another.
Masks	Adaptive-looking output coexists with hidden cost or constraint in another constellation.
Compensates	A strength maintains function despite another limitation.
Constrains	One state limits expression of another.
Protects	A boundary or stable process reduces exposure to strain.
Redirects	Energy is carried into a different channel.
Destabilizes	The interaction lowers coherence or increases volatility.

Integrates	Multiple states align with low contradiction and manageable cost.
Reveals	A second constellation clarifies an ambiguous first.
Shifts	Temporal evidence shows movement between interaction regimes.

VOLUME II

The Resonance Signature Bible

The mathematical visual system that renders the same truth as the ledger.

I. The Visual Truth Contract

The Resonance Signature is the hero of the logged-in profile and results experience. It is not the hero of the public landing page, where explanation, trust, and product understanding lead. Once the user has a result, the interface steps back and the signature becomes the primary personal object.

VISUAL PROPERTY	DATA SOURCE	MEANING
Radial extent	Dimension posterior mean	Strength of current point expression.
Edge softness	Posterior interval / confidence	Uncertainty.
Line density	Evidence coverage	How much valid evidence supports the region.
Roughness	Contradiction / low coherence	Mixed or unstable evidence.
Luminosity	Signal reliability × confidence	Visibility of trustworthy structure.
Color family	Constellation identity	COG blue; REG cyan; CAP pale/white; EXP violet.
Inward/outward flow	Signed temporal momentum	Return, expansion, or transition.
Missing arc	Unresolved dimension	Unknown, never zero.
Reference ghost	Trusted personal reference	Visually secondary comparison shape.

Renderer input contract

Each of the sixteen dimensions supplies mean, interval, confidence, evidence coverage, reliability, coherence, contradiction, signed momentum, baseline trust, and unresolved status. Constellation geometry and typed interactions accompany these values. Acoustic measures may shape microtexture but may not change interpreted meaning.

2. Unified Interference Field

The production signature is contoured from one unified signed interference field, not four detached charts or isolated contour islands.

$$F_{total} = F_{core} + F_{COG} + F_{REG} + F_{CAP} + F_{EXP} + F_{pairwise} + F_{multiway} + F_{texture}$$

Four broad field sources are anchored in a diamond and overlap across the full domain. Pairwise interactions create bridges, bends, compression, reinforcement, and localized counter-phase behavior. Three- and four-field overlap creates the central convergence. The combined field is normalized once and then contoured.

PROHIBITED OUTPUT

A single generic turbine, four disconnected corner islands, a radar chart, a pasted center flower, decorative sacred geometry, or a beautiful complete field produced from incomplete evidence.

Dimension oscillator

W_d(x,y) = A_d · E_d(r) · sin(k_d r + h_d θ + φ_d + momentum_d r)

Mean controls reach and amplitude. Interval width controls envelope spread. Coverage controls contour population. Coherence controls continuity. Contradiction introduces localized counter-phase deformation. Signed momentum alters directional phase without becoming a global spiral.

Perceptual luminance

displayLuminance = 0.16 + 0.84 · (signalReliability · confidence)^0.36

The nonlinear curve preserves evidential ranking while ensuring valid mid-confidence structure remains visible on real mobile screens. Rendering visibility is a display transform, not a change to the underlying confidence.

3. Contours, Hierarchy, and Glow

Use robust field-adaptive percentile contours plus a smaller absolute contour family for cross-scan comparability. Require a minimum active-level and path-population gate before publishing. Important contours use three passes: low-opacity bloom, colored support stroke, and crisp core stroke.

TIER	ROLE	TYPICAL TREATMENT
Convergence spine	Multi-field, high-confidence, high-coverage structure	2–4 px core; white-capable; strongest restrained bloom.
Primary contour	Strong constellation-specific evidence	1–1.8 px core; clear brand color; moderate support glow.
Secondary contour	Moderate evidence	0.55–1.1 px; limited bloom.
Uncertainty trace	Low confidence or interval spread	0.35–0.75 px; soft, dim, interrupted.

Nothing glows unless it is carrying information.

THE GLOW RULE

4. Brand Palette for the Signature

ROLE	COLOR FAMILY	STARTING TOKENS
Background	Deep space navy-black	#01040A / #030B14

COG	Electric blue	#168CFF / #6DCEFF
REG	Luminous cyan-aqua	#10DFDA / #70FFF4
CAP	Pale mint to near-white	#B8F5ED / #F3FFFF
EXP	Violet-periwinkle	#9856FF / #D2A4FF
Convergence	Near-white	#F7FFFF

Color communicates constellation identity only. It never means good, bad, healthy, unhealthy, spiritual rank, diagnosis, or certainty.

5. Longitudinal Signature

A single scan is a moment. Repeated scans create a living field. Older structures become dimmer; newer structures become brighter; repeated geometry becomes thicker; repeated recent geometry becomes thick and bright; emerging geometry is bright but not yet thick.

$$w_s = \exp(-\lambda \cdot \text{age}_s) \quad \text{persistence}(q) = \sum \hat{w}_s \cdot \text{similarity}(q, q_s)$$

Do not overlay complete scan images. Cluster equivalent contour structures and reinforce shared geometry. Longitudinal claims remain unavailable until repeated-scan validation demonstrates that displayed movement corresponds to the intended constructs.

6. Canonical Dashboard Presentation

SOULSCOPE

YOUR RESONANCE
SIGNATURE

WHAT SOULSCOPE NOTICED TODAY

Responsive Integration

TODAY YOUR VOICE REFLECTED
RESPONSIVENESS WITH RECOVERY

The approved dashboard concept establishes the private product hierarchy: signature first, reflection second, evidence and provenance available through progressive disclosure. It is a visual guide, not a literal data result or production screenshot.

PUBLIC LANDING EXPERIENCE	PRIVATE LOGGED-IN EXPERIENCE
Explains the idea of a new instrument for self-observation.	Reveals the user's completed personal result.
Uses more text, philosophy, science, trust, and product description.	Uses less explanation and gives the signature visual authority.
The story is the hero.	The Resonance Signature is the hero.
Voice is presented as the first current lens, with future modalities framed carefully.	The result, traceability, history, and reflection become primary.

I. Brand Definition

SoulScope is an instrument for observing the inner environment.

The brand sits between scientific instrumentation and intimate self-reflection. It should never feel clinical, mystical, generic wellness, cyberpunk, or emotionally manipulative. The visual and verbal system must communicate precision without coldness, beauty without decoration, and possibility without certainty.

Brand attributes

- Instrument-like, evidence-led, and traceable.
- Premium, quiet, editorial, and spacious.
- Curious rather than declarative.
- Personal without becoming invasive.
- Scientific without resembling a hospital product.
- Mysterious enough to invite discovery, clear enough to earn trust.

Design principles

PRINCIPLE	APPLICATION
The public experience explains.	Landing pages use more narrative, science, product education, and reassurance.
The private experience reveals.	Logged-in results reduce copy and make the signature the hero.
Beauty must emerge from evidence.	No decorative randomness in data visualizations.
Negative space is structural.	Do not fill quiet areas merely because room exists.
Every element earns its place.	Remove redundant cards, labels, glows, and ornaments.
Curiosity outranks certainty.	Use reflective, bounded language.
Privacy creates trust.	Make capture, retention, deletion, and consent legible.
Complexity disappears behind clarity.	Advanced evidence remains available without overwhelming the main experience.

2. Language and Lexicon

TERM	CANONICAL MEANING
------	-------------------

Resonance Scan

The guided acquisition session.

Evidence	A quality-gated statement grounded in measured features.
Dimension	A continuous probabilistic functional tendency derived from evidence.
Constellation	One of four four-point views of current vocal functioning.
Pattern	A post-hoc summary of resolved constellation states and interactions.
Resonance Field	The mathematical interaction space used by the renderer.
Resonance Signature	The deterministic visual expression of the immutable result object.
Reflection	The controlled written explanation of completed reasoning.
Reference Signature	A trusted personal baseline built from compatible prior observations.
Timeline	Longitudinal changes across completed scans.

Approved language

- A new instrument for self-observation.
- Observe your inner world.
- Your voice is the first lens.
- Your voice. Your pattern. Your signature.
- One scan reveals a moment. Many scans reveal a story.
- Recognition, not diagnosis.
- The goal is to help you notice what may have been difficult to see on your own.

Language to avoid

- Definitive identity labels or claims that the system knows the user better than they know themselves.
- Diagnosis, deception, hidden-truth, organ-health, chakra, energetic-certainty, or causal claims.
- Negative comparison language that frames a scan as a verdict.
- Overly technical copy on the public-facing hero or primary result view.
- Promises that future modalities are already active or scientifically validated.

3. Typography

ROLE	TYPEFACE	USE
------	----------	-----

Editorial display	EB Garamond / approved premium serif	Pattern names, chapter titles, major reflective statements.
Interface and body	Inter	Navigation, buttons, body copy, labels, forms, documentation.
Technical metadata	JetBrains Mono	Scan IDs, versions, timestamps, evidence references, debug views.
Wordmark	Approved SoulScope brand lettering	Logo only; never substitute with body fonts.

Typography should feel intentional and breathable. Display serif is reserved for moments of meaning. UI remains direct and highly legible. Technical mono is sparse and precise.

4. Color and Light

TOKEN	VALUE	PURPOSE
Void	#030B14	Primary background.
Deep Surface	#07111F	Cards, navigation, structural panels.
Instrument Panel	#0A1827	Elevated information surfaces.
Editorial White	#F4F6FF	Primary text and near-white signal.
Cool Text	#CCD8E6	Secondary body and labels.
SoulScope Cyan	#61E7EC	Primary active accent; use sparingly.
COG Blue	#168CFF	Constellation identity.
REG Cyan	#10DFDA	Constellation identity.
CAP Mint	#B8F5ED	Constellation identity.
EXP Violet	#9856FF	Constellation identity.

COLOR DISCIPLINE

Brand cyan is not wallpaper. Signal colors appear where information is active: the signature, selected states, progress, and evidence-linked interaction. Buttons and cards do not glow by default.

5. Layout and Experience

AREA	DIRECTION
Landing page	Text-rich relative to the private product. Explain the instrument, why voice, what is measured, scientific boundaries, privacy, and how repeated scans create a story.
Logged-in profile	Signature-led. The user's accumulated field is the dominant object, followed by current reflection and change over time.
Single result	Signature first, one primary pattern, concise reflective sentence, then optional evidence and trace details.
History	Visual timeline of signatures with meaningful deltas, not a list of diagnostic scores.
Scan flow	Calm guided prompts, explicit capture quality, visible progress, and no premature conclusions.
Mobile	Signature remains large and legible; content follows in a clear vertical sequence.
Desktop	Signature occupies 55–65% of primary results hero; supporting text does not overpower it.

VOLUME IV

The Developer Bible

Engineering contracts that keep SoulScope deterministic, secure, reproducible, and maintainable.

I. Architectural Invariants

- The Evidence Ledger is the only inference gateway.
- Narrative and visualization consume the same immutable completed result object.
- The renderer never analyzes raw audio or recalculates dimensions.
- Permanent IDs are never recycled or silently repurposed.
- Every production result stores extractor, registry, rule, model, and renderer versions.
- Missing evidence remains missing; it is never silently imputed as neutral.
- No generative model performs scoring, state selection, causal inference, or unsupported interpretation.
- Every conclusion and major visual property is traceable to source evidence.

2. Versioning and Reproducibility

OBJECT	REQUIRED VERSIONING
Acoustic feature	Feature ID, definition version, unit, extractor, extractor version, task compatibility.
Evidence rule	Rule version, required inputs, quality gates, confounds, prohibited uses.
Dimension registry	Permanent ID, semantics, required families, support and contradiction rules.
State registry	Permanent ID, region, evidence requirements, exclusions, adjacency, lifecycle.
Interaction registry	Permanent ID, subject/object, verb, conditions, alternatives, confidence method.
Pattern registry	Permanent ID, required states/interactions, exclusions, why-won/why-lost.
Renderer	Input contract, field algorithm, contour schedule, palette, precision, checksum.
Narrative	Template version, tone mode, source IDs for every sentence.

3. Testing Standard

LAYER	REQUIRED TESTS
Extraction	Golden audio, reproducibility, device/noise, clipping, quiet voice, vocal fry, tracker failures.

Evidence	Quality gates, baseline compatibility, confounds, support/contradiction, missingness.
Dimensions	Independent evidence families, confidence components, unresolved behavior, signed momentum.
Constellations	Candidate distance, eligibility, blends, abstention, permanent decision trace.
Interactions	Controlled verbs, thresholds, exclusions, alternative relations.
Narrative	Source citations, prohibited claims, mixed-evidence preservation, tone-only variation.
Signature	Same input → same field/SVG; missingness; central occupancy; connectedness; distinct fixtures; no generic spiral/islands.
Product	Guided scan completion, calibration-only baseline, prompt order, final publication boundary.
Security	Secret scanning, environment hygiene, private-data retention, access controls, dependency review.

4. Repository and Release Discipline

- Production work is based on main and merged through deliberate review when branch protection is enabled.
- Generated artifacts, local environments, audio captures, private documents, Supabase temporary files, and editor backups must not be tracked.
- CI must run focused tests, full tests, type checking, lint, production build, and diff checks.
- Visual renderer changes require fixture exports and a renderer version bump when geometry materially changes.
- Database migrations require executable validation, RLS review, grant review, rollback planning, and compatibility notes.
- The repository must never contain court documents, personal records, credentials, or retained scan audio outside approved storage policy.

VOLUME V

Research & Validation

How SoulScope becomes evidence-based rather than merely evidence-inspired.

I. Validation Phases

PHASE	GOAL	MINIMUM WORK	RELEASE EFFECT
0 — Measurement	Verify feature correctness.	Golden fixtures; Praat/openSMILE comparison; device/noise tests; reproducibility.	Only raw and evidence views.
1 — Reliability	Measure repeatability and baseline stability.	Test-retest; task effects; within-person variance; ICC/MDC; missingness.	Conservative personal-change language.
2 — Construct	Test dimensions against preregistered observations.	Multiple self-report/context anchors; convergent/discriminant validity; confound models.	Provisional constellation states.
3 — Generalization	Evaluate across people and environments.	Held-out devices, languages, accents, ages, sex/gender, neurotypes; subgroup calibration.	Broader beta after fairness gates.
4 — Longitudinal	Test whether movement means what the UI says.	Repeated scans; momentary context; transition and recovery analysis.	Timeline and momentum claims.
5 — Outcome	Assess whether reflection helps without causing harm.	Comprehension, agency, distress, false certainty, behavior and support outcomes.	Marketing claims limited to demonstrated outcomes.

2. Ground-Truth Strategy

- Do not use one mood questionnaire as “truth.” Use task condition, user reflection, repeated measurements, observer ratings where appropriate, and governed physiological measures.
- Separate expressed affect from felt affect. Voice can communicate an expression that differs from subjective experience.
- Pre-register primary hypotheses, feature families, thresholds, exclusions, and evaluation metrics.
- Use participant-level splits; never place the same speaker in train and test sets.
- Report calibration, uncertainty, subgroup performance, false-positive costs, missingness, and abstention—not only accuracy or AUC.
- Validate display names for comprehension, emotional impact, unintended judgment, and cultural interpretation.

3. Present and Future Modalities

MODALITY	STATUS	CANONICAL POSITION
----------	--------	--------------------

Voice acoustics and timing	Current focus	Perfect measurement, evidence, baseline, reasoning, and rendering before expansion.
Facial dynamics	Future research	Potential movement/expressions evidence; requires consent, fairness, lighting/device validation.
Eye behavior and pupil dilation	Future research	Potential attention/activation-related observations; highly context-sensitive.
Breathing and posture	Future research	Potential regulatory and effort context; requires robust capture and confound handling.
Heart rate / HRV	Future research	Potential physiological context; requires validated sensors and strict health-claim boundaries.
Movement and wearables	Future research	Potential longitudinal context; must remain optional, privacy-preserving, and evidence-gated.

FOCUS RULE

The vision is multimodal; the current product effort is voice-first. No new modality enters production because it is interesting. It enters only after measurement correctness, privacy, reliability, construct validity, fairness, and user-understanding gates are met.

4. Research Sources and Intellectual Position

SoulScope adopts standardized acoustic vocabulary, robust personal baselines, many-to-many cue interpretation, abstention, uncertainty, segmentation, temporal change, and traceable reporting. It rejects proprietary score cloning, one-cue/one-emotion logic, deception claims, diagnostic authority, closed-corpus certainty, and feature-count marketing.

- eGeMAPS and openSMILE concepts for standardized feature vocabulary and reproducible extraction.
- Praat/Parselmouth for validated F0, formant, jitter, shimmer, HNR/ CPP workflows with quality gates.
- Vocal emotion and stress literature for bounded many-to-many cue interpretation.
- Voice-health literature for research potential, longitudinal methods, privacy, fairness, and clinical-translation cautions.
- LVA and EmotionLogic as architectural references for calibration, segmentation, temporal aggregation, and structured reporting—not proprietary algorithm replication or truth/deception claims.

Canonical Decisions for Version 1.0

DECISION	STATUS
SoulScope is an instrument for observing the inner environment.	FIXED
Voice is the first and current production lens.	FIXED
Future multimodal direction is part of the vision, not current product capability.	FIXED
Evidence Ledger is the only inference gateway.	FIXED
Four constellations and sixteen dimensions.	PROVISIONAL — calibration required
Narrative and signature consume one immutable result object.	FIXED
The public experience explains; the private experience reveals.	FIXED
The signature is the hero of logged-in profile and result experiences.	FIXED
Beauty emerges from evidence; uncertainty and missingness remain visible.	FIXED
Clinical, diagnostic, deception, organ, identity, and spiritual-measurement claims.	PROHIBITED
Thresholds and weights shown in early editions.	RESEARCH PRIORS — version and calibrate
Longitudinal and future-modality claims.	DEFERRED UNTIL VALIDATED

Your voice. Your pattern. Your signature.

SOULSCOPE

Source Documents Incorporated

- SoulScope Constellation Bible v0.1 — Research & Architecture Foundation.
- SoulScope Resonance Signature Bible v1.0 — Deterministic Visual System.
- SoulScope Resonant Signature Rendering Specification v1.
- SoulScope Brand Stylesheet and launch-page language.

- Approved signature and dashboard concept images supplied and developed during the SoulScope design process.

This Canon is a living specification. It consolidates and elevates the current direction; it does not replace the need for empirical calibration, legal/privacy review, accessibility review, or prospective validation.
